

# Why choose ISO 22301 & ISO 27001?

## Defend your business from cyber-attack and disruption

By deciding to implement ISO 22301 and ISO 27001 in an integrated management system, you will be creating a streamlined set of processes that align your information security and business continuity goals to give your organisation the processes it needs to reduce risk, recover quickly from disruption and maintain its reputation.

### With ISO 22301 and ISO 27001 your business can:

- ✓ Clearly define and identify ownership and responsibility for key processes
- ✓ Efficiently allocate resources across the business
- ✓ Quickly identify areas for improvement with regular checks
- ✓ Roll-out improvements through a single, integrated system for maximum efficiency and effectiveness

## Principles of ISO 22301 and ISO 27001

### Leadership

- Who are your key personnel?
- How will you delegate duties to give individuals responsibility of specific areas?

### Planning

- What are your goals and objectives?
- What are the risks your business could face?
- What training will you need to give your staff?

### Support

- Do you have the resources you need to achieve your goals?
- How will you document and communicate them?

### Operation

- How will you carry out risk assessments, and how often?
- Do you have the latest software updates and antivirus protection?
- What processes will your business need to prevent, assess and recover from disruption?

### Evaluation

- How will you monitor, measure, analyse and evaluate your business' information security and continuity plans?

### Improvement

- How do you document process reviews and ensure the right improvements are made?

With guidance and support from our expert consultants you will be able to develop and implement an integrated management system that grows with your business and helps you to achieve your continuity and information security goals.
