

# Why extend ISO 27001?

## Adapt your ISMS to fit with your business' unique demands

By choosing to implement ISO 27001 extensions or codes of practice (such as ISO 27701, ISO 27017 or ISO 27018) you can create a more comprehensive information security management system that can help your business to keep up with ever-changing IT systems and demands, keeping you on the front foot of information security.

### With ISO 27001 extensions and codes of practice your business can:

- ✓ Create an ISMS that is highly tailored to your business and its needs
- ✓ Create more focused and relevant controls and processes
- ✓ Ensure compliance with the latest legislation
- ✓ Provide additional reassurance to customers and stakeholders that information will be protected

## Principles of ISO 27001 extensions and codes of practice

### Leadership

- Who will be accountable?
- Who is responsible for implementing the new controls?

### Planning

- How will you achieve your goals?
- What areas do your team need to focus on?
- Will you be introducing ISO 27001 alongside the extensions or adapting an existing management system?

### Support

- Do you have the resources you need to achieve your goals?
- How will you document and communicate them?

### Operation

- How will you carry out risk assessments, and how often?
- How will PII be collected, stored, managed and processed?
- How can information in a cloud be kept safe?

### Evaluation

- How will you measure, monitor, analyse and evaluate your business' performance?

### Improvement

- How do you document process reviews and ensure the right improvements are made?

With guidance and support from our expert consultants you will be able to develop and implement a management system that grows with your business and helps you to achieve your information security objectives.
