

Why ISO 27001?

Defend your business from cyber-attack and keep information safe

By choosing to implement ISO 27001 your business proves that it is ready to create a culture of security, prioritising the protection of information. With processes in place to maintain cyber security, you can reassure customers, stakeholders and staff that your business keeps confidential information secure, manages its risk exposure and provides all-round protection.

With ISO 27001 your business can:

- ✓ Create robust policies on password protection, encryption and access for the secure transmission of information
- ✓ Involve your staff and stakeholders to put security at the heart of your business
- ✓ Manage and minimise risk to build confidence in your systems
- ✓ Stay up to date with all the latest legislation and regulations
- ✓ Reassure new and old clients that you meet the requirements of a globally recognised Standard

Principles of ISO 27001

Leadership

- Who will take responsibility of the management system?
- How will you delegate duties to give individuals responsibility of specific areas?

Planning

- What are your information security goals and objectives?
- How can you incorporate information security into your current processes?
- What training will you need to give your staff?

Support

- Do you have the resources you need to achieve your goals?
- How will you document and communicate them?

Operation

- How will you carry out risk assessments, and how often?
- Do you have the latest software updates and antivirus protection?

Evaluation

- How will you measure, monitor, analyse and evaluate your business' performance?

Improvement

- How do you document process reviews and ensure the right improvements are made?

Context of the organisation

- What information security challenges does your business face?
- Who are your interested parties?

With guidance and support from our expert consultants you will be able to develop and implement a management system that grows with your business and helps you to achieve your information security objectives.
