

Copado Pull Requests Issues

Commits Unrelated to the Pull Request

Due to the branching model of Copado you can see commits you do not expect, this is explained here <https://docs.copado.com/article/330ki5aws8-pull-request-shows-changes-unrelated-to-the-components-committed-on-the-user-story> but basically since the feature branch is based off the main branch you may see extra commits relating to the production release the first time you deploy to QA after the release since the main branch is ahead of the QA branch.

This is not something to be concerned about you can just disregard those extra commits, see the screenshots below which shows commits made during the release from Vazeer to be ignored plus the new commit which is relevant to the pull request from Dominic To see the relevant changes switch to 'Files Changed' tab and select the commit you wish to view the changes for by selecting 'Changes from all commits'

Feature/us 0000484 #128

Edit < > Code

Open dominicneau wants to merge 10 commits into qa from feature/US-0000484

Fake Changes Being Highlighted

On pull requests on objects sometimes 'fake' changes are being highlighted normally due to the metadata being re-ordered, so you will see some metadata being deleted but being re-added in another location. This just requires a manual review to identify the real changes. It could also be due to formatting issues that setting your github to ignore whitespace might fix.
