Why Cyber Essentials?

Cut the risk of cyber-attack by 80%

By choosing to gain a Cyber Essentials certificate you will be implementing five government-backed controls that enable your business to manage its cyber threats and prevent around 80% of cyber-attacks, giving you and your customers added peace of mind.

With Cyber Essentials your business can:

- ✓ Implement best-practice controls to help you prevent cyber-attacks
- ✓ Reduce the cost of insurance premiums
- ✓ Increase customer confidence
- ✓ Protect your organisation's reputation
- ✓ Meet more requirements set in government tenders

Controls of Cyber Essentials

Boundary firewalls and internet gateways

- Implement and manage boundary firewalls
- Gain greater control over server traffic

Secure configuration

- Configure computer and network devices
- Reduce storage and bandwidth consumption

Access control

- Introduce access controls and administrative privileges
- Reduce the risk of an insider threat

Malware protection

- Install the latest malware protection
- Introduce processes to ensure this is kept up to date

Patch management

- Ensure licences and software are kept up to date
- Ensure patches are installed as soon as they become available

Third party validation (Cyber Essentials Plus)

- Go the extra step and receive an onsite visit from one of our consultants to verify what you have declared in the online assessment

With a Cyber Essentials certificate, you can demonstrate that you have the controls in place to help protect your business from cyber-attack, and if you opt for our helpful Cyber Essentials Assist service, you can also have our experienced help and guidance to complete the online assessment with ease.
